- Ink Bottle (S)
- Paint Bucket (K)
- Eyedropper (I)
- Eraser (E)
- Hand (H)
- Zoom (M, Z)

Improve your workflow with the use of quick ‘hot keys’ designed to enable users to quickly move between different tools.

While editing in Flash, users can invoke any of the Flash Tools in the palette by pressing the indicated key on the keyboard.

In addition, Flash provides hints for usage that appear when users hover their mouse over a button, icon, etc. Thus, for special tools that are invoked near the bottom of the Tools palette when a given drawing tool is chosen, the corresponding quick key can be discovered by simply hovering over its button for a moment.

Many of the tools contained in other Adobe CS3 programs feature the same quick keys for the same tools in their respective palettes. For instance, the Selection tool in Photoshop, Illustrator and FireWorks may be invoked by pressing ‘V’ on the keyboard.
